Cisco has already created the Interior Gateway Routing Protocol (IGRP) in the 1980s, and the same needs that drove people to create RIPv2 and OSPF drove Cisco to improve IGRP as well.

Enhanced Interior Gateway Routing  
Protocol (EIGRP) is an advanced dynamic  
routing protocol that is used for routing  
decisions and configuration on the routers.  
EIGRP was developed by Cisco Systems  
as a proprietary protocol, which can be

used only on Cisco routers but in 2013 partial functionality of EIGRP was converted to an open standard. EIGRP only sends incremental updates, reducing the workload on the router and the amount of data that needs to be transmitted.

EIGRP can be used not only for Internet Protocol (IP) networks but also for AppleTalk and Novell NetWare networks. Using EIGRP, a router keeps a copy of its neighbor's routing tables. If it can't find a
