Linear Programming is a technique for making decisions under certainty i.e.; when all the courses of options available to an organisation are known & the objective of the firm along with its constraints are quantified. That course of action is chosen out of all possible alternatives which yields the optimal results.

Essentially, a linear programming problem asks you to optimize a linear function of real variables constrained by some system of linear inequalities. This is an extremely versatile framework that immediately generalizes flow problems, but can also be used to discuss a wide variety of other problems from optimizing production procedures to finding the cheapest way to attain a healthy diet.

Linear Programming Project Ideas 1. Profit optimization for business plan. Every business needs financial resources to get things started and sustain over time. Moreover, investors and credit providers usually ask for detailed analyses of profitability. And LPP can be immensely helpful in clearly explaining the viability of a business.

Linear Programming Projects Ideas & Topics For Beginners ...

Linear Programming is the analysis of problems in which a linear function of a number of variables is to be optimized when these variables are subject to a number of restraints in the form of inequalities. Linear programming helps the management to know either the maximum profit strategy or the best production programmes open to it.

In other words, with the RB1 greater than or equal to RB2 in the constraint set, a linear programming solution may have fractional values for some variables. We have to solve the problem as an integer programming problem, which differs from a linear programming problem in that some or all variables are restricted to be integers.
