Looping is required when we need to process something repetitively until a certain condition is met. For example, we can design a program that adds a series of numbers until the sum exceeds a certain value. We can also write a program that prompts the user to enter data repeatedly until he or she enters the word ' Finish '. In Visual Basic 2012, there are three types of Loops, they are the For.....Next loop, the Do loop. and the While.....End while loop.
